

## About:

The GC Rivera Foundation is our family's foundation started by my mother, Dr. Rebecca C. Rivera, M.D. where we offer surgical, medical, integrative medicine, autistic and humanitarian services for FREE. On February 5-12, 2017, we completed our last missions in La Union and Laoag, Philippines. With the help of The Gerald Anderson Foundation's autism dog therapy program, the focus was treating special needs children with Down's syndrome and Autism Spectrum Disorder. Our surgical team consists of top surgeons in their field from New York City, NY specializing in major and minor surgeries such as thyroid, gallbladder, hernias, etc. Our foundation also presented two medical training seminars while working at the Ilocos Training and Regional Medical Center educating the local doctors and nurses on 1) advanced robotic surgery and 2) The Causes of Autism.

All previous medical missions have been incredibly successful. With the help from all teams and their volunteers we have seen hundreds of minor and severe cases, with impeccable end results. In 2018, we saw strictly only autistic children, and saw 75 in the span of 4 days. Our most recent trip to Guimaras Island, Iloilo City, Philippines, we opened our arms to a broader audience and saw men, women and children of all ages. Within 3 -days, we saw 423 patients, accomplished 26 major surgeries and 167 minor surgeries.

An addition the Integrative team brought to the table was the RASHA Technology. A complex device I created using the most advanced frequency generating software that protects, enhances and harmonizes the autonomic nervous system (ANS) by relieving stressors, transmuting negative habitual patterns, supporting relaxation, cellular detoxification, etc. Essentially used to relieve stress and reduce inflammation. This device has been seen to do wonders on all users in one- way, or another.

**Dr. Jere Rivera- Dugenio. PH.D**
